ABOUT THE FIRM

Scott Colomb Landscape Architect is a full service landscape architecture firm in Moreland (Coweta County), Georgia providing our clients throughout the Southeastern US and beyond with the highest level of personalized design service. Our projects reflect the desires of our clients in the creation of functional spaces, enriched with meaningful details, providing deeply personal connections. Our clients gain the benefit of decades of experience in project design, aesthetic detailing, site engineering, and construction processes.

ABOUT SCOTT COLOMB, PLA ASLA

Producing beautiful and functional designs, Scott Colomb is a talented and experienced landscape architect practicing site planning and landscape design for people-oriented projects ranging from residences to churches, hospitals, children's camps, and parks. With a responsive ear for his clients' desires and a critical eye toward site conditions, his creative solutions are more than aesthetically pleasing because he believes and intends for each design to respond on a personal level for those experiencing his work. His attentiveness and thoroughness toward projects derives from his passion for his work, while his design skills originate with training both in a nationally-ranked landscape architectural degree program and under leading and renowned landscape architects, including Dr. Robert Reich and Edward L. Daugherty. With his logical nature, understanding of construction processes and management, and years of experience working with and under professional engineers, he is often sought after as a consultant on complex projects or those with unusual construction components because of his ability to blend aesthetics with functional and practical engineered solutions.

PROFESSIONAL EXPERIENCE

Scott Colomb, Landscape Architect, Moreland, Georgia, 1994 - Present

Complete design and planning services for residential and institutional projects, including site planning, site design, landscape and site structure design (pools, fountains, paving, recreational courts, accessory structures, etc), bid administration, and construction observation.
